

St Andrew's College Intune Terms and Conditions

To ease onboarding of new student and staff BYODs onto the College's Wi-Fi networks, we have enabled the optional management of personal devices using our Microsoft Endpoint Manager service.

Once enrolled, your device will automatically have certificates and configuration applied to allow it to connect to the College's Wi-Fi network without further user or ICT intervention. However, note that to facilitate this Microsoft Endpoint Manager does allow the College to manage enrolled devices, and see various components of those devices.

Specifically:

What the College can see on enrolled devices:	What the College cannot see on enrolled devices:
<ul style="list-style-type: none">• hardware details such as model, serial number, and operating system;• the names of applications installed on the device;• the name of the device, and the student/staff account associated with it.	<ul style="list-style-type: none">• personal activity such as Browsing history, emails, contacts, or calendar entries;• passwords;• documents.
What the College will do to enrolled devices:	What the College will NOT do on enrolled devices:
<ul style="list-style-type: none">• install configuration required for the device to connect to the College Wi-Fi;• enforce the use of a password on the device (users can still use alternate login options like Hello for Business or TouchID to unlock the device);• offer optional applications that can be installed via the Company Portal app;• in some cases, Windows will upload the devices BitLocker key to our environment. This is undesired functionality that is built into Windows.	<ul style="list-style-type: none">• automatically install applications;• reset the device to factory settings;• actively review the applications or settings present on the device unless they are directly involved in the points we will do to the left.

As detailed above, the College is using this system exclusively to provide an easier method of deploying Wi-Fi functionality to these devices and offer optional applications to users with the lightest touch to personal devices we can. We have no plans nor desire to extend this configuration and will duly inform students via College email if any of the above information changes.

When students leave the College, management of any enrolled devices will be terminated when their accounts are closed and archived, ending any connection between the student's device and the College's services.
